

Bargain List - Inside wound Near Edge

Bargain List of odd size and overstocked thermal transfer ribbons suitable for use on near edge technology printers such as Avery, Soabar and some types of in-line coding printers that require the ink wound on the inside.

The production of thermal transfer ribbons unavoidably means that odd size ribbons are produced. There may be production runs that leave shorter ribbons at the end of jumbo rolls or set ups that produce odd sizes that help reduce trim waste. These odd sizes are perfectly usable and together with any standard sizes that we may regard as excess inventory, offer a very competitively priced alternative to our standard range.

You the customer can take advantage of extra competitive pricing, and TTS can keep our manufacturing and inventory costs to a minimum, resulting in ongoing price competitiveness. We offer these ribbons at 25% off from your standard grade prices.

NEX-20 GRADE - PREMIUM NEAR EDGE WAX RESIN
